MRS. D. MAYCOCK

MRS. B. PAIN

MRS. M. WALKER

MR. F. RICHARDS

(Pupil Public Health Inspector)

ANNUAL REPORT

Mr. Chairman, Ladies and Gentlemen,

I herewith present my Annual Report for the year 1960.

In the body of the report I have compared the situation of the Rural District Council of thirty years ago with the situation facing it at the present time. Today, the "take over bids" by the larger authorities, if successful, will have far greater effect on the Rural District Council than those mooted in 1930/31.

One other matter, I feel, should not go without notice, is the retirement of Mr. T. W. Binns, Chief Public Health Inspector. Mr. Binns came to this Authority in 1924 and has seen many changes. Until 1930, the District Inspectors worked from their homes and had to do all their own office work. Among many other innovations, Mr. Binns was the moving spirit in introducing refuse collection by direct labour and the service commenced with a pilot scheme of three vehicles working mainly in the southern area of the Rural District. Ultimately more vehicles were purchased and the services of Contractors terminated.

As one who has had the privilege of close association with Mr. Binns, I know and appreciate his sense of duty, great integrity, and enthusiasm for all the aspects of Public Health work. No one could have had a more loyal and helpful colleague.

We have been most fortunate in his successor, Mr. John Wilson, who early in his career was a District Inspector with this Authority.

The vital statistic figures show only slight variation from the previous year. The population has increased, according to the estimate of the Registrar General by 1120. The birth rate is down by one per 1000 population, but the infantile mortality rate is increased by five per 1000 population. There were no maternal deaths reported during the year.

In conclusion, I record my thanks to the Council for their unfailing support and to my colleagues for their help during the year, and in the preparation of this report.

lam,

Your obedient servant,

JOHN R. GRAHAM,

Medical Officer of Health

Health Offices,

Rural Council House,

Chesterfield

| | | | | | | | | |

SOCIAL CIRCUMSTANCES OF THE AREA

The Council are all aware that there are prospects of great changes in the structure of local government, and it appears that the Rural District may suffer from the insatiable ambition of powerful neighbours.

Thirty years ago the position was similar; changes were mooted and the then Rural District was reduced in size.

Some of the statistics in the reports of 1930 and 1931 show most interesting contrasts to those of 1960.

The population of the Rural District in 1930 was 84,710, which included what is now the Staveley Urban District, Coal Aston, Dronfield Woodhouse, incorporated in the Dronfield U.D. and Woodthorpe Farish, now part of the Clay Cross Urban District.

In 1930, the infantile death rate was 69.52, the birth rate in that year being 19 per 1000, the figures for this year being 21.5 and 17.7 respectively. In that year eleven deaths of women were recorded as a consequence of child birth; there are no deaths from this cause in 1960.

The records for ordinary infectious disease are equally gratifying. Fourteen deaths occurred in 1930 from Scarlet Fever and 260 cases were notified; 283 cases of Diphtheria produced 17 deaths.

Only one case of Diphtheria has been notified in the Rural District since 1950 and Scarlet Fever is now a comparatively mild infection. In addition, in 1930. If teen deaths were attributable to measles and thirteen to whooping cough.

There have been no deaths recorded from these diseases in 1960, while during the epidemic of measles in 1961, in which 1587 cases were notified in four months, no deaths were recorded.

How has this improvement been brought about? Many factors are involved; modern methods have contributed, such as immunisation for prevention, and the modern antibiotics have played a great part in the prevention of death. The work of the Infant Welfare Centre in teaching mothercraft has played a big part. The improvement is largely due to the principles which were laid down by Chadwick and the pioneer sanitarians of the middle of the 19th century, namely, that for health, people should have clean food, clean water and clean air. This may seem a simple statement but the implications are, of course, very far reaching, and we are only now, after 100 years, beginning to attain their objective, such as adequate housing for the lower income groups, improved sanitation, and last but not least the great improvement in late years in the cleanliness and purity of the milk supply.

There have been no major industrial developments during the year except for a factory at Halfway dealing with ingot liners and moulds, and approvals given for the erection of a factory at Hackenthorpe to deal in electrical components and transformers.

WATER SUPPLY

The quality and quantity of the piped supplies was generally satisfactory. Throughout the year routine bacteriological examinations were carried out on 83 samples of drinking water taken from the mains supply; six of these gave an unsatisfactory result and appropriate action was taken; twenty-two samples were taken from wells and springs and these were of doubtful quality.

CHESTERFIELD BOLSOVER AND CLOWNE WATER BOARD

The length of mains laid in the Rural District for new housing sites during the year ended 31st December 1960 was 1109 yards.

NORTH EAST DERBYSHIRE JOINT WATER COMMITTEE

The following works were either commenced or completed during the year ending 31st December, 1960.

- (a) Barlow Village Supply completed July, 1960.
- (b) Marsh Lane Reservoir put into use November, 1960 (Eckington Service Reservoir taken out of service July, 1960).
- (c) High Lane Covered Service Reservoir put into use for Beighton August, 1960.
- (d) Additional 4 m.g.d. pumping unit installed at Ogston Treatment Plant.
- (e) Reconstruction of Barlow Treatment Plant commenced during year and work still in progress.
- (f) New Trunk main from High Lane Covered Service Reservoir to supply Killamarsh and Mosborough areas commenced during year and work still in progress.
- (g) Mainlaying for housing estates for the Constituent Authorities and private development.

SEWERAGE AND SEWAGE DISPOSAL

The Engineer has furnished the following information:—
Northern Area Sewage Disposal Works

Many complaints were received regarding smell at the new Northern Area Sewage Works. The smell during the first few months of operation came from partially digested sludge on the drying beds during the starting up period for the digester. There is now no cause for complaint.

The house, laboratory and mess room were completed early in the year and with the completion of Killamarsh Flood Relief Scheme, the sewage from Killamarsh was diverted via the new Killamarsh pumping station to Northern Area Works.

The works are now operating satisfactorily and turning out a good effluent.

Holmesfield Pumping Station and Works Extension

The new pumping station to serve the school and adjoining property was completed towards the end of the year. Work on the extension to the Holmesfield Sewage Disposal Works is still in progress but should be completed early in 1961.

Pipworth Lane Sewerage Scheme

A sewage scheme to serve properties in the vicinity of the Atco Works was carried out during the year.

Contracts Let

Contracts were let towards the end of the year for the following but work had not started by the year end.

- (1) A sewer extension to take trade waste from the Tar Distillery at Killamarsh.
- (2) The Gleadless-Ford trunk sewer to convey sewage from Gleadless and Ridgeway to the Northern Area Works and to abandon the existing treatment works at Gleadless and Ford and the sewage tank at Back Lane, Mosborough.
- (3) The Eckington Surface Water Scheme.

Schemes at the Ministry

- (1) Wadshelf Sewerage and Sewage Purification Scheme.
- (2) A recirculation scheme for Holbrook Sewage Purification Works.
- (3) A sewerage scheme for Heath.
- (4) A sewage purification works for Long Duckmanton and Arkwright Town and the abandonment of the existing works at Arkwright.

Schemes in course of preparation

- (1) Second stage of Beighton Sewage Purification Works reconstruction.
- (2) Barlow Sewage Purification Works reconstruction.
- (3) Proposed extension at Ashover and Kelstedge Sewage Purification Works.
- (4) Westwood Brook Sewage Purification Works.

ATMOSPHERIC POLLUTION

The gauges situate at Holmewood and Renishaw are sited with a view to monitoring the pollution from coke ovens and blast furnaces respectively. They do not indicate a general level of pollution, but they show the nuisance caused to a group of people in a small area adjoining those plants. It will be realised that these industries are scheduled, and so come within the purview of the Alkali Inspector. Close co-operation is maintained with the local Inspector but the transfer of responsibility has not yet worked any miracles in the reduction of pollution. Local Councillors and Local Officials still receive the bulk of the complaints and action is still demanded of them in the search for a mitigation of nuisances.

Correspondence with the Ministry suggested that the Council should await the Government report on Smoke Control Areas before proceeding further. This has now been received and the Council are anxious to make an immediate start. Although only a part of the District is shown to be in the so-called "black area" the Council wish to extend smoke control into the remaining parts of the District.

An examination of the returns published by the Department of Scientific and Industrial Research might easily lead to wrong conclusions. This Rural District has large areas of beautiful country where the total level of pollution is negligible; it has many residential areas where the pollution level compares favourably with other residential areas. In fact, it is a typical piece of England in which we have pin-pointed our black spots by placing our deposit gauges in the right position to measure their worst effects. We could move our gauges 100 yards, and return better figures but our problem would remain, and we should be deprived of a yard stick.

INFECTIOUS DISEASES

INFECTIOUS DISEASES

The notification of Infectious Diseases showed no great change. Scarlet Fever notifications were less by eighty-eight but Whooping Cough showed an increase of one hundred.

There were no cases of Poliomyelitis notified during the year.

Once again it is pleasing to report that no deaths were attributable to any of the ordinary infectious diseases.

The notifications of new cases of pulmonary and non-pulmonary tuberculosis were practically on par with the previous year's figures.

NATIONAL ASSISTANCE ACT, 1948.

Quite a number of cases have been visited during the year with a view to taking action under this Act, but the majority were not living in such conditions that action could be taken.

One case Mrs. "B" which I referred to in my report of last year, who was subject to an order some three years ago, became very ill and consented to go for treatment. She made some progress but had a relapse and died.

Mrs. "W." This old lady was visited quite regularly and had the services of a Home Help but would not allow the help to do much. Eventually conditions became so bad that an order was sought and obtained and she was removed to Part III accommodation in Scarsdale Hospital.

One other case is under observation, a Miss "T." She has also been the subject of an order under the Act but was given a chance to resume her life at home with the services of a Home Help. At first. she kept herself fairly clean but latterly has given trouble regarding the attendance of the help and seems to be deteriorating. If no improvement is made it will be necessary to seek another order for her removal to Part III accommodation.

PETROLEUM ACTS

Two new petroleum stores have been constructed and four have ceased to be used during the year, making the present total of 148 separate stores. These have a total capacity of 1097,375 gallons.

There are two carbide of calcium stores with a licensed capacity of 2294 lbs.

The stores have been inspected and found to comply with the provisions of the Acts.

Licence fees amounted to £121 5 0

VERMINOUS PREMISES

The following are particulars of the number of houses disinfested during 1960.

INSPECTION AND SUPERVISION OF FOODS

Meat Inspection and Slaughterhouses

During the year fourteen slaughterhouses were licensed but only ten slaughterhouses were in regular use. Once again 100% post mortem meat inspection was maintained of all animals slaughtered for sale for human consumption. This has involved the inspectorate in a large number of visits, and necessitated a considerable amount of work outside normal office hours. Despite the inconvenience caused, it is imperative to provide a safe meat supply by the continuance of the practice of inspection of all animals slaughtered for human consumption.

The statistical table (Table A) shows a continuation of last year's marked decrease in the incidence of tuberculosis. This is due undoubtedly to the introduction of the Tuberculosis Eradication Scheme into this and surrounding areas. Close co-operation has been maintained with the Regional Veterinary Officers of the Ministry of Agriculture Fisheries and Food, and all cases of tuberculosis found in slaughterhouses are reported to the Regional Office so that the Veterinary staff are able to trace the origin of any affected cattle.

The incidence of other diseases (excluding cysticercosis) shows little change from the preceding year. The principal cause of condemnation has been due to liver fluke infestations. These fluke infestations were more prevalent during the early part of the year, and the fine Summer of 1959 which one would have expected to have caused a reduction in them may probably have an effect on next year's statistics.

Cysticercosis Bovis has increased by 25% compared with 1959. Efforts to trace the source of these infections have been made but no satisfactory results obtained. It seems highly probable that birds, particularly seagulls, play a part in the dissemination of this disease. Several cases have been discovered where the animals had never grazed anywhere but in one enclosed field. There was no possibility of sewage contamination of the field. Consequently, contamination by birds seems to be the only logical explanation.

One case of generalised sarcosporidiosis was discovered due to co-operation with the Public Health Laboratory Service. The affected animal was a two year old bullock which on post-mortem examination appeared normal except for a slight oedema and poor rigor mortis. Specimens were submitted to the Laboratory and microscopic examination revealed the presence of sarcocysts throughout the musculature. The carcase was condemned.

The total weight of carcase meat and offal condemned amounted to slightly more than 12 tons. In all cases this was voluntarily surrendered, and formal seizure procedure was unnecessary. All unfit meat and offal has been regularly collected in order to ensure that proper disposal takes place without risk to the public of diseased meat finding its way back on to the market.

The Slaughterhouse Report in the form required by the Slaughterhouses Act, 1958, was approved by the Council in July, 1960, and submitted to the Minister of Agriculture, Fisheries and Food. The report was completed following inspections and individual consultations with slaughterhouse occupiers. A meeting was also held between interested parties and organisations and representatives of the Rural District Council.

The report stated that eight slaughterhouses were expected to be brought up to the standard of the new Construction Regulations and that those eight would be adequate to deal with present and future slaughtering requirements. It was recommended that the day when the Regulations would come into force for the area should be 1st August, 1961.

The Minister subsequently accepted the report but for administrative reasons varied the appointed day to 1st October, 1961.

The work required by the new Construction Regulations has been virtually completed at one slaughterhouse, two others are progressing satisfactorily; plans are being prepared in two instances whilst in the remaining three cases the final proposals have not yet been formulated.

Other Foods

Regular supervision has been maintained over other types of foodstuffs. A considerable amount has been condemned either during routine inspection or on examination following requests by traders. In all cases the food found to be unfit was voluntarily surrendered, removed from the premises and destroyed.

A summary of other food condemned is shown in Table B.

Sampling of ice cream for bacteriological examination has been introduced during the latter part of this year. All samples taken proved to be satisfactory.

Food Hygiene Regulations 1955-1960

There are 528 Food shops in operation in the district; 180 licensed premises; 66 school premises; 42 canteens and restaurants and 20 miscellaneous food premises. As many visits as practicable have been made to these premises with a view to obtaining compliance at all times with the Regulations.

The majority of premises have now been brought up to the structural standard required by the Regulations but there is scope for much work to be carried out by way of supervision and education of the food handlers in order to ensure food is stored and handled in as satisfactory and hygienic a manner as possible at all times.

Mobile traders continue to present a problem. By their nature, regular supervision is difficult but a number of inspections have been made and improvements obtained in many instances.

Some measure of control is afforded by Section 137 of the Derbyshire County Council Act, 1954 which requires the registration of food hawkers. There are now 83 hawkers operating in the district who are registered under this Act.

The new Food Hygien? (General) Regulations, 1960, where they relate to stalls and vehicles are not as specific in some details as they might have been. It appears that it was the Minister's intention to limit the provision of washing facilities on vans etc. to businesses of the catering type only. However, many kinds of food such as cooked meats, meat pies, cream cakes and pastries etc. are sold for consumption which do not require further preparation and there is an ever-present risk of an outbreak of food poisoning from these foods.

It is essential that cleanliness of hands and equipment is secured and maintained with reference to any food but especially where the food sold is available for immediate consumption, and in these cases I am firmly of the opinion that washing facilities are an absolute necessity.

Some firms arrange for their employees to have had washing facilities made available at specific points on their rounds. Unfortunately, hands do not get dirty to a set pattern; such things as punctures have a habit of occurring at awkward times, as all motorists know, and money received in payment for goods can also be a source of contamination.

LEGAL PROCEEDINGS

(a) Food and Drugs Act 1955

One case was instituted against a butcher for the sale of meat unfit for human consumption due to external contamination. The case was found proved and a fine imposed.

(b) Food Hygiene Regulations. 1955-1960.

PREVENTION OF DAMAGE BY PESTS ACT, 1949.

During the year 557 premises have been visited by your Inspectors and surface infestations dealt with by the rodent operatives to secure satisfactory elimination of rats and mice. Visits and inspections were made in respect of agricultural holdings with a view to occupiers continuing with the Council operated control service. Occupiers have been made aware of the fact that they have a legal responsibility to maintain their premises free from infestation and the Council's service operates from the desire to help with any difficulties experienced as a result of the cessation of the Ministry service.

All the Council's sewage works and refuse tips are kept under observation and when infestations are found appropriate action is taken.
